SUMMARY

Software engineer specializing in React, React Native, TypeScript, and Node.js, with a track record of shipping production mobile, web, and backend systems. Currently Co-Founder and Mobile App Developer at StudExpress, a travel booking platform live on Google Play, building core app features (payments, booking flows) alongside the operational systems behind them. Background spans a role-based university management system that boosted administrative efficiency by 35% and improved lecturer productivity by 25%, plus applied ML research building a full-stack backend for automated test-flakiness detection and repair.

EXPERIENCE

StudExpress | *Co-Founder & Mobile App Developer* **Sep 2025 - Present**

- Co-run an interstate travel booking platform for university students, live on Google Play.
- Built and shipped the mobile app end-to-end, including a wallet and payment flow with Flutterwave integration and platform-specific PDF ticket downloads.
- Managed the EAS build pipeline, app versioning, and Google Play Console requirements (data safety, content rating, closed testing) ahead of production launch.
- As Co-Founder, designed the company's operational backbone, a 3-tier ambassador commission structure, agent payout system, and a full operations handbook running the business side alongside development.

Focus Group | *Frontend Developer Intern* **Mar 2025 - Sep 2025**

- Improved lecturer productivity by 25% (impacting 80 lecturers) by developing a Lecturer Portal, enabling faster examination result entry, editing, and submission workflows.
- Reduced exam scheduling conflicts by 50% (saving approximately 4 hours weekly) by implementing examination result management and scheduling features on the Admin Dashboard.
- Improved user experience across devices by implementing responsive design and cross-browser compatibility, ensuring consistent performance on desktop and mobile.
- Created reusable React components with React.js, CSS, and Git, cutting feature development time by 20% while boosting code maintainability and scalability.
- Collaborated with a 10-member team using Agile methodology, building a University Management System feature by feature to ensure iterative progress and quality delivery.

PROJECTS

FlakeyRadar - Final-Year Research Project **2026**

- Architected and built the backend service (Node.js, Express, TypeScript) that orchestrates automated test runs, collects flaky-test data, and exposes a REST API consumed by the CI pipeline and the classification layer.
- Integrated a CodeBERT-based classification model into the backend pipeline to automatically detect, categorize by root cause, and trigger automated repair of flaky tests in JavaScript CI pipelines - addressing a well-known source of unreliable test signals.
- Evaluated model performance using standard ML metrics (precision, recall, F1) across flaky-test categories.

EXTRACURRICULAR

GDG | *Stack Lead, Mobile Dev* **Nov 2025 - Jul 2026**

- Mentor fellow students in mobile development languages, tools, and best practices.

EDUCATION

Landmark University **Oct 2026**
B.Sc., Computer Science (GPA: 4.83 / 5.0) *Kwara State, Nigeria*

SKILLS

Languages: JavaScript, TypeScript, Python, HTML, CSS, Tailwind CSS
Frameworks & Libraries: React, React Native, Expo, Next.js
Backend & APIs: Node.js, Express, REST, GraphQL, MongoDB
ML / Research: CodeBERT, Transformers, PyTorch-based evaluation (precision/recall/F1)
Tools & Practices: Git, EAS Build, Google Play Console, Agile, Redux, Context API, Axios, Responsive Design
